

## Obie Woolward

International Hero of Hope - 2012

When diagnosed with cancer, Obie Woolward's children were only 9 and 13 years of age – they went with her that day. Ten days after her left mastectomy she was informed that she had Paget's disease and had to undergo a second mastectomy within two days. She's thankful for the wisdom to realise no matter how small her contribution towards life and fellow men are, a change in one person, is a change in the world.
